

It Stands on • The Frame

From the foundation up, Outback Steel Buildings from Next Generation are built to withstand the ravages of time without the high depreciation inherent in typical pole buildings. The steel framing is delivered pre-cut, with all the hardware and siding and is ready to assemble. Our exclusive bolt-together building system will save you money because it requires no special equipment or time consuming inspections.

It Starts with • a Plan

(design program, engineers, personal attention)

A plan designed specifically for your needs taking into account permits, city ordinances, neighborhood restrictions, and unique site opportunities. It will be designed and engineered with an eye toward making the building look and function exactly how you need it to.

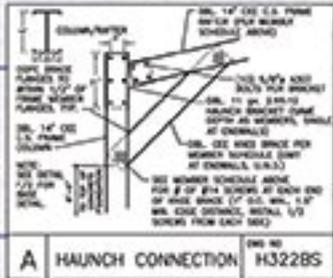

Built to Last.
